EuroBachTeX 2011

Introduction

- T_EXnische Kommödie 3/2010: Article by Uwe Ziegenhagen
- Known folding scheme from a project with my brother Heinz
- PocketMod: www.pocketmod.com

Notes

The Basic Idea

- The production of the personal organizer must be simple
- Week number
- Year

23 Sat

April 2011

24 Sun Easter Sunday

April 2011

Decisions

- Pocket Diary is based on ISO8061.
- First week is defined as the week having the **first Thursday** in it.
- The first day of the week is **Monday**.

Week calendar Week 16 2011

18 Mon	
19 Tue	
20 Wed	
21 Thu	
22 Fri <small>Good Friday</small>	
23 Sat	24 Sun <small>Easter Sunday</small>

Calculations

Lua

- Lua starts the week on Sunday → ISO8061: Monday
- Lua calculates with floating points → rounding errors are possible

Babwanis Congruence

- PocketDiary uses the gregorian calendar.
- Babwanis congruence offers the formula for the calculation of the weekday.

$$w = \text{mod}(\text{floor}(\frac{5y}{4}) + f(m) + d - (2 * \text{mod}(c,4)), 7)$$

$$y = \text{mod}(\text{year}, 100)$$

$$c = \text{floor}(\text{year}/100)$$

$$m = \text{month}$$

$$d = \text{day}$$

May 2011

Mon	Tue	Wed	Thu	Fri	Sat	Sun
						1
2	3	4	5	6	7	8
					14	15
16	17	18	19	20	21	22
23	24	25	26	27	28	29
30	31					

Os-System-Library

- Lua function os.date
 - os.date(%a,timestamp) → Short name of the weekday
 - os.date("*t",timestamp) → Table with date info from timestamp

Example: 1. April 2011:

year	month	day	yday	wday	hour	min	sec	isdst
2011	4	1	91	6	12	0	0	

```
\startsetups table:month
  \setupTABLE[c][each][width=.1\textwidth,offset=2.5pt]
\stopsetups
```

Week calendar Week 16 2011

18 Mon	
19 Tue	
20 Wed	
21 Thu	
22 Fri	Good Friday
23 Sat	24 Sun Easter Sunday

```

\startluacode
  local s = os.date("*t",os.time{year=2011,month=4,day=1,hour=12})
  context.bTABLE({setups="table:month"})
    context.bTR({align="middle"})
      context.bTD() context("year") context.eTD()
      context.bTD() context("month") context.eTD()
      context.bTD() context("day") context.eTD()
      context.bTD() context("yday") context.eTD()
      context.bTD() context("wday") context.eTD()
      context.bTD() context("hour") context.eTD()
      context.bTD() context("min") context.eTD()
      context.bTD() context("sec") context.eTD()
      context.bTD() context("isdst") context.eTD()
    context.eTR()
  context.bTR({align="flushright"})
    context.bTD() context(s.year) context.eTD()
    context.bTD() context(s.month) context.eTD()
    context.bTD() context(s.day) context.eTD()
    context.bTD() context(s.yday) context.eTD()
    context.bTD() context(s.wday) context.eTD()
    context.bTD() context(s.hour) context.eTD()
    context.bTD() context(s.min) context.eTD()
    context.bTD() context(s.sec) context.eTD()
    context.bTD({align="middle"}) context(s.isdst) context.eTD()
  context.eTR()
context.eTABLE()
\stopluacode

```

- `os.time{year=2011,month=4,day=1,hour=12}` reveals 1301652000

Extensions

- Calculate and display Christian feast days
 - Ash Wednesday: Easter Sunday - 46 days
 - Palm Sunday is Easter Sunday - 7 Tage
 - Good Friday is Easter Sunday - 2 Tage
 - Easter Monday is Easter Sunday + 1 Tag
 - Ascension Day is Easter Sunday + 39 Tage
 - Pentecost Sunday is Easter Sunday + 49 Tage
 - Pentecost Monday is Easter Sunday + 50 Tage
- Display a month table
- Produce a yearcalendar
- Multilingual interface: English, German, Italian, French, Dutch

23 Sat

April 2011

24 Sun Easter Sunday

April 2011

Christian Feasts

- Easter Sunday must be calculated.
- Paschal full moon must be calculated.
- Great help: Easter Sunday calculation by Ron W. Mallen (1985) (<http://www.assa.org.au/edm.html>)

- Base: 5 tables for the calculation of the Paschal full moon.
- Support: Basic Programm for the calculations → translated into Lua
