- typesetting scores in TEX is freak, isn't it?
- notes are generally used less frequently than mathematics
- about typesetting (engraving?) of scores in BachoTEX there was presentation in ancient times by Bogusław Jackowski and Marek Ryćko
- after it was almost all about notes but not in TEX
- but by this time we were doing the music, we screened and sang „Miała baba koguta" and „Płonie ognisko i szumią knieje"
- why not in TEX?

Why this melody was not typeset in TEX?

Typesetting of notes in TEX is not simple

- the problem is a common belief that it is so difficult that even impossible
- the notes does not have a baseline
- notes can not be spaced by glue
- the space between notes depends nonlinearly on their value
- notes are connected by ties and slurs
- are preceded by sharps and flats
- needs ornaments
- special signs (repetitions, voltas, segno, coda etc.)
- and for example: guitar chords

Typesetting of notes in TEX is not simple

- notes are connected by ties and slurs
- are preceded by sharps and flats
- needs ornaments
- special signs (repetitions, voltas, segno, coda etc.)
- and for example: guitar chords

Requires knowledge about music, notation and practice

- scales and keys, circle of fifths, basics of musical transposition
- relations between the value of the notes, rhythm, bar, meter
- style of notation (example):

Scores in TEX are engraved using preprocessors

- rich TEX code is difficult to write for human
  — we need code generator
- space calculating code in TEX is ineffective and unsatisfactory
  — we need external program
- convenient typesetting words under notes is not trivia
  — we need program support
- preprocessors were shaped by historical reasons

Scores in TEX are engraved using preprocessors

- rich TEX code is difficult to write for human
  — we need code generator
- space calculating code in TEX is ineffective and unsatisfactory
  — we need external program
- convenient typesetting words under notes is not trivia
  — we need program support
- preprocessors were shaped by historical reasons

Main processor — MusiXTEX

- by Daniel Taupin twenty five years ago (1991)
- improved by external positioning (space calculating) program in 1997
- two(three) pass model
  1. first TEX pass writes information about notes to log
  2. external program `musixflx` writes calculated spacings to another log
  3. second TEX pass uses calculated data and typesets notes properly
- TEX command `\startmuflex` starts spacing logs
- `\endmuflex` stops
- in LATEX implicit with `\begin` and `\end{document}`
- MusiXTEX code is hard to write, understand, maintenance, transpose to another key etc. but...
- MusiXTEX is successfully typesetting notes

Main processor — MusiXTEX

- by Daniel Taupin twenty five years ago (1991)
- improved by external positioning (space calculating) program in 1997
- two(three) pass model

- MusiXTEX is successfully typesetting notes

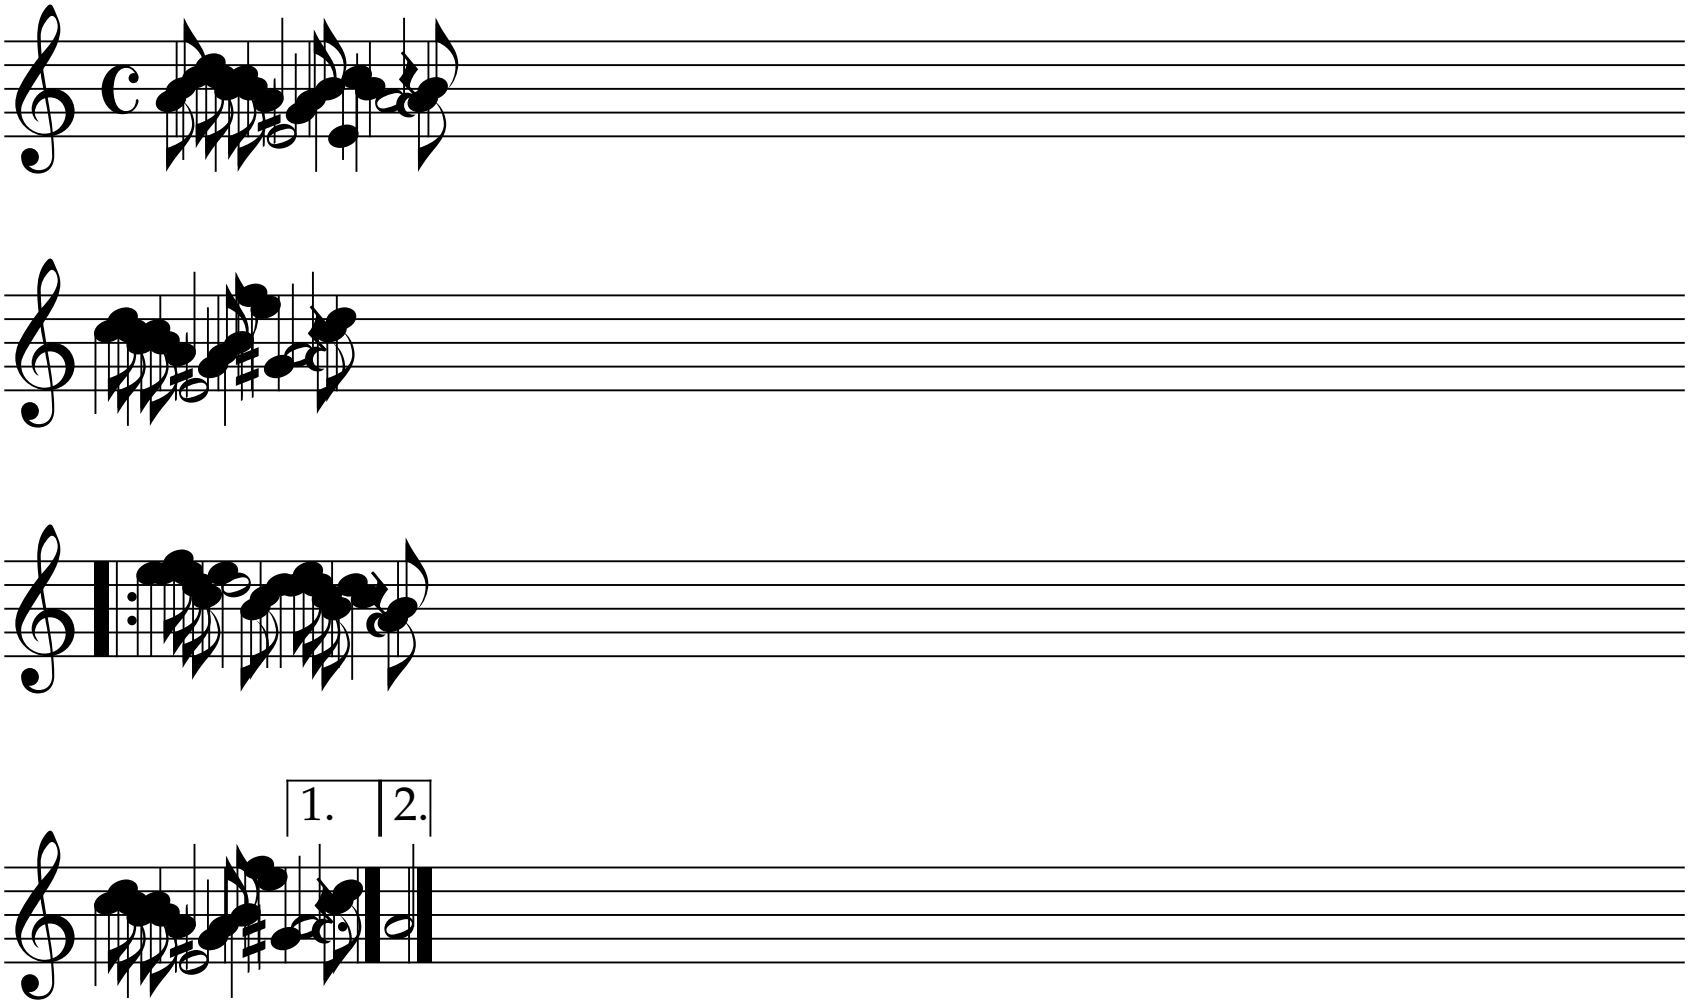
Before `musixflx` (after first pass)



After `musixflx` (after last pass)

ABC notation

- musicians, while reading note from i.e. third line or second field between lines are not naming sounds by numbering or lettering places of note (MusiXTEX does)
- they call sounds using letters of alphabet, according to scale, tradition etc. but regardless of the octave
  - Polish tradition for major scale: *c*, *d*, *e*, *f*, *g*, *a* and *h*
  - English tradition for major scale: *c*, *d*, *e*, *f*, *g*, *a* and *b*
  - sol-fa (solfeggio) tradition *do*, *re*, *mi*, *fa*, *sol*, *la* and *si*
  - sound can be modified using sharp (♯) or flat (♭)
  - Polish tradition gives for chroma separate naming using suffix *is* or *es*, eg. *cis* or *des*; exception is *es*, *as* and *b* (= English $b_\flat$)

ABC notation preprocessor — PMX

- by Don Simons (1997)
- after letter (English tradition, `r`=rest) is coded length of note: 0 — whole, 2 — half, 4 — quarter, 8 — eight, 1 — sixteen etc.
- after this can be coded octave: „+" — one up, „-" — one down and explicite 4 — one-line octave
- after can be coded `s` — sharp and `f` — flat and much more (triplets, graces, up/down ...)
- there are another spells ie. slurs `( )` or ties `{ }`, voltas etc.
- `\command\` goes directly to the TEX code as `\command`
- our melody in PMX abc notation:

```
a84 b8 c4 d8 c8 b4 c8 b8 / a4 e2 g8s a8 / b4 e4- c4+ b4 /
a2 r4 a8 b8 / c4 d8 c8 b4 c8 b8 / a4 e2 g8s a8 /
b4 f4+ e4 g4-s / a2 r4 c8 d8 / Rl e4 e4 f8 e8 d8 c8 /
e4 d2 b8 c8 / d4 d4 e8 d8 c8 b8 / d4 c4 r4 a8 b8 /
c4 d8 c8 b4 c8 b8 / a4 e2 g8s a8 / b4 f4+ e4 g4-s /
V1 a2 r4 c8 d8 / Rr m3/4/0/0 V2b a2d /
```

- preprocessor name is `pmxab` and extension is `.pmx`

ABC notation preprocessor — PMX

- by Don Simons (1997)
- after letter (English tradition, `r`=rest) is coded length of note: 0 — whole, 2 — half, 4 — quarter, 8 — eight, 1 — sixteen etc.
- after this can be coded octave: „+" — one up, „-" — one down and explicite 4 — one-line octave

V1 a2 r4 c8 d8 / Rr m3/4/0/0 V2b a2d /
```

- preprocessor name is `pmxab` and extension is `.pmx`

Weakness of PMX abc notation

- unnatural polyphonic record
- descriptions over the stave
- PMX header is a sequence of numbers (ugly)
- lyrics under (over) notes

Weakness of PMX abc notation

- unnatural polyphonic record
- descriptions over the stave
- PMX header is a sequence of numbers (ugly)
- lyrics under (over) notes

Music with text preprocessor — M-Tx

- by Dirk Laurie from 1998
- organizes record by introducing stanzas of form:

```
U: code for text over staves
   extended pmx code for voice
   extended pmx code for other voice
L: ly-rics for voi-ce
L: a-no-ther ly-rics
```

- header has form:

```
Keyword: value
Keyword2: value2
```

- line preceded by double comment (%%) is injected into PMX
- styles are defined in file `mtxstyle.txt`, i.e.

```
SINGER: Voices S; Vocal; Clefs G
```

- preprocessor name is `prepmx` and extension is `.mtx`

Music with text preprocessor — M-Tx

- by Dirk Laurie from 1998
- organizes record by introducing stanzas of form:

```
U: code for text over staves
   extended pmx code for voice
   extended pmx code for other voice
L: ly-rics for voi-ce
L: a-no-ther ly-rics
```

- header has form:

```
Keyword: value
Keyword2: value2
```

- line preceded by double comment (%%) is injected into PMX
- styles are defined in file `mtxstyle.txt`, i.e.

```
SINGER: Voices S; Vocal; Clefs G
```

- preprocessor name is `prepmx` and extension is `.mtx`

Script prepc.bat for typesetting in TEX:

```
if EXIST %1.mtx (
  del %1.log
  del %1.mx1
  del %1.mx2
  del %1.pml
  del %1.pmx
  del %1.tex
  prepmx %1
  pmxab %1
  luatex %1.tex
  musixflx.exe %1.mx1
  luatex %1.tex
)
```

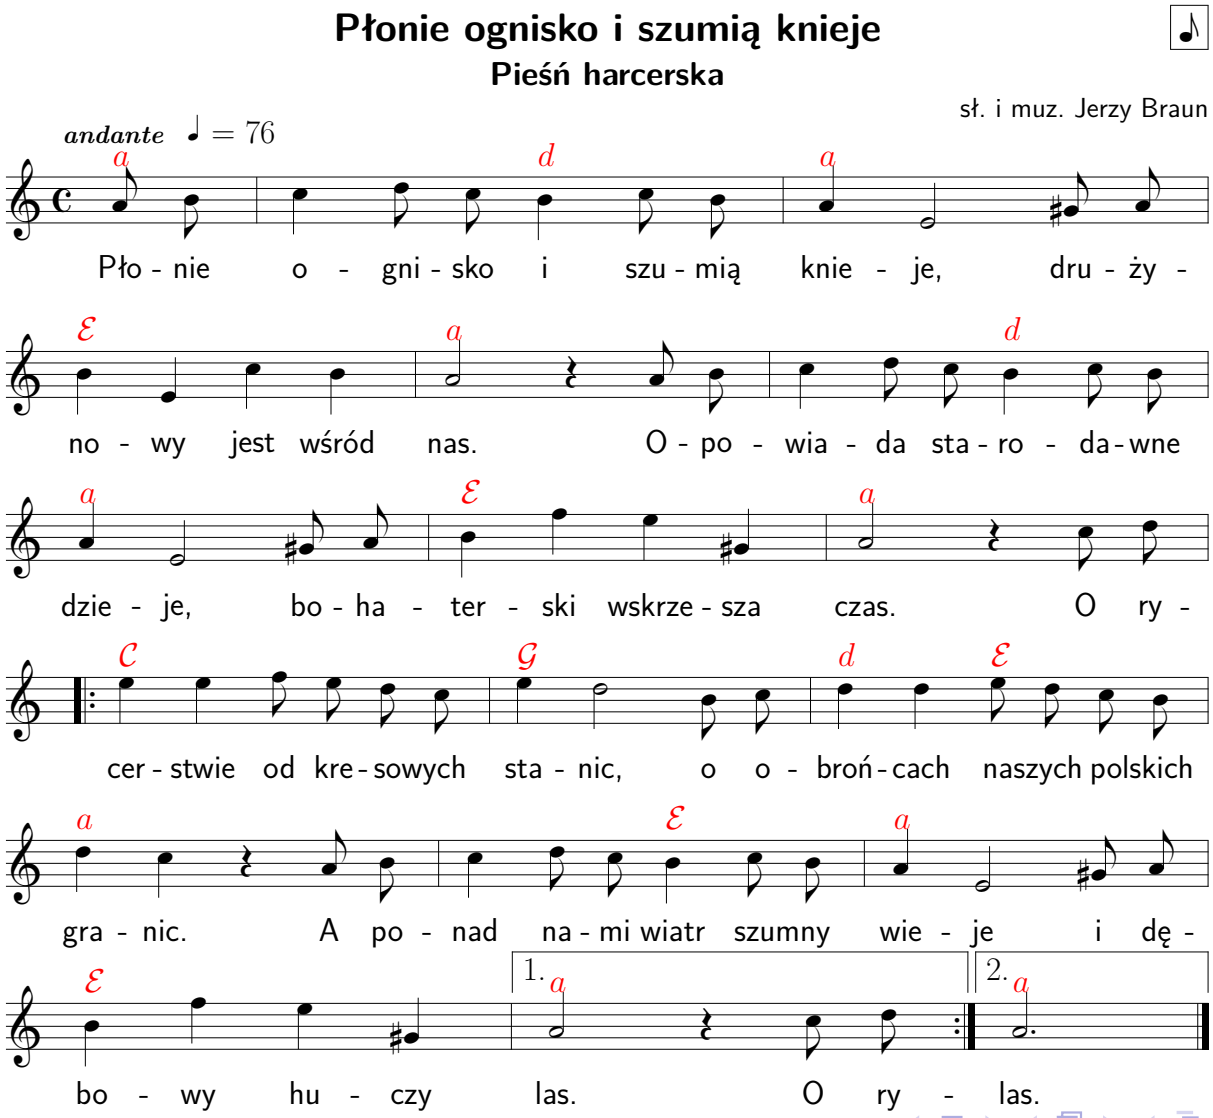
TEXstudio configuration

- in TEXstudio options we define custom build command: `<full-path>prepc.bat % | txs:///view-pdf-internal`
- we connect this command to Alt-X; preview will be refreshed at every hotkey press
- another script, starting generated `.mid`, is connected to Alt-Z

So we write our song...

- System: Microsoft Windows
- Framework: TEXstudio
- Scripts connected to left Alt-X and Alt-Z
- Compiler: LuaTEX

Our goal



Płonie ognisko i szumią knieje
Pieśń harcerska
sł. i muz. Jerzy Braun
andante ♩ = 76
Pło - nie o - gni - sko i szu - mią knie - je, dru - ży -
no - wy jest wśród nas. O - po - wia - da sta - ro - da - wne
dzie - je, bo - ha - ter - ski wskrze - sza czas. O ry -
cer - stwie od kre - sowych sta - nic, o o - broń - cach naszych polskich
gra - nic. A po - nad na - mi wiatr szumny wie - je i dę -
bo - wy hu - czy las. O ry - las.

Header of the song in M-Tx

```
Part: Pieśń harcerska
Title: Płonie ognisko i szumią knieje
Composer: sł. i muz. Jerzy Braun
Meter: C
%Sharps: 1
%Flats: 1
Space: 3 10 20

```

Key tranposition

- PMX transposition:
  command `K`±<shift>±<key>
- chords transposition:
  count `\transposeQ`=±<fifths>

Macro recording

- MIDI macros:

IMR*n*	starts recording
IM	stops recording
IMP*n*	play macro

- text macros:

MR*n*	starts recording
MS*n*	starts saving
M	stops recording/saving
MP*n*	play macro

Cleaning TEX code for LATEX

- LATEX don't need standalone prologue
- unnecessary commands:

```
\input mtx
\input pmx
\input musixtex

\startmuflex
\endmuflex

\setmaxslurs{24}\setmaxinstruments{24}
\nopagenumbers
\vfill\eject\bye
```

Cleaning scripts pre.bat

```
if EXIST %1.mtx (
  del %1.pml
  del %1.pmx
  del %1.mid
  del %1.tex
  del %1.ex
  prepmx %1
  pmxab %1
  awk -vf=%1 -f clean.awk %1.tex >%1.ex
  call rrr.bat
  del rrr.bat )

BEGIN{n=f".mtx";
while(getline < n > 0)
  {if($0 ~ /MIDIFILE/)
   {m=$2;print("copy "f".mid "m".mid")>"rrr.bat"}}}
$0!~/\\eject\\endmuflex/&&
$0!~/\\bye/&&
$0!~/\\input/&&
$0!~/\\nopagenumbers/
  {gsub("\\\\startmuflex","");
   gsub("\\\\setmaxslurs{24}","");
   gsub("\\\\setmaxinstruments{24}","");
   print $0}
/\\input *mtx/
  {print "\\def\\mtxmidi{"m"}"}
```

MHB in LATEX prologue

- equivalents of cleaned commands
- recommended command for `\input`'ting cleaned file `.ex` in MusiXTEX `music` environment
- `\titles` command and companion for code:
```
\znotes\zcharnote{16}{%
\titles{2.0}{Pieśń harcerska}{2.0}{\mtxTitle}{2.0}%
{\mtxPoetComposer}{2.0}}\en%
```
- modification of commands defined in MusiXTEX or preprocessor packages eg. in order to neutralize
- switches, eg. `\nobarnumbers`
- definition of commands injected into TEX code

Script for build Songbook

```
for %%n in (B*.mtx) do call pre.bat %%~nn
del BachoTex2016.aux
del BachoTex2016.log
del BachoTex2016.mx1
del BachoTex2016.mx2
del BachoTex2016.out
del BachoTex2016.pdf
del BachoTex2016.toc
lualatex.exe -synctex=1 -interaction=nonstopmode
BachoTex2016.tex musixflx.exe BachoTex2016.mx1
lualatex.exe -synctex=1 BachoTex2016.tex
```

Big sheet music project

- almost 500 pages of scores
- almost all heard from recordings on compact cassetes and written by ear
- some recorded about 50 years ago, poor quality
- many of these songs were monodies (without rhythm)
- songs of Neocatechumenal Way, religious communities formation in the Catholic Church
- refresh and restore the original — direct transfer pauperized melodies
- GNU Open Source and Free Documentation licences
- files in `http://andrzej.odyniec.info/sp`

Important things when typesetting songbook scores

good source

- reach out to existing scores, even when the melody is widely known
- it is worth trying to get to the original edition
- you must also have a good text and master, good, or at least correct harmonization
- meter, rhythm, division into bars and distribution of accents is important

author fidelity

- it is good to get author's writing and/or author recording
- own human memory is insufficient, unless it is widespread

- you must also have a good text and master, good, or at least correct harmonization
- meter, rhythm, division into bars and distribution of accents is important

author fidelity

- it is good to get author's writing and/or author recording
- own human memory is insufficient, unless it is widespread

Important things when typesetting songbook notes

readability

- in the sense that the singer or instrumentalist can easily and accurately read melody

right key choice

- it is good to take into account the typical ranges of human voices
- some keys are to difficult for amateurs especially on diatonic instruments (i.e. six sharps)

careful scores verification

- error in pitch or rhythm will always be troublesome for the reader or performer
- generated MIDI can be helpful

LilyPond

- by Han-Wen Nienhuys and Jan Nieuwenhuizen from 1996 after abandon MPP (MusiXTEX PreProcessor)
- by LilyPond Development Team from 2003
- created to achieve the beauty and balance of a handengraved score
- output is improved gradually over time, and it continues to improve by comparing its output to hand-engraved scores
- sophisticated enough to write complex notes of classical works
- unified non-hybrid solution, in contrast to MusiXTEX and preprocessors
- a serious competitor to the preprocessing+TEX solution

LilyPond pro's (this is not SWAT)

- beauty of engravings
- one program, independent of vagaries of TEX
- is not WYSIWYG
- is advanced
- very good for restore classics to electronic form
- creates pdf

LilyPond contra's

- closed solution
- is not WYSIWYG
- is advanced to learn (notation reference has 825 pages)
- to difficult to use in simple songbook
- creates only pdf

M-Tx→PMX→TEX pro's

- beauty is better than in handwriting
- is not WYSIWYG
- is advanced when we need power of MusiXTEX and simple if we need write songbook
- creates pdf and TEX and LATEX and others
- allows to use whole power of TEX (including hyperlinks and other pdf tricks)

M-Tx→PMX→TEX contra's

- beauty is probably less than LilyPond
- is not WYSIWYG
- protrude from under the covers dirty feet of MusiXTEX
- do not creates handmade engravings
- TEX's full power can overwhelm
- errors sometime are hard to diagnose

Which solution is better?

There is no better solution!

Both are different solutions!

Thank You
